KCC TECHNICAL · PRODUCTION & TECHNICAL

Crew Guide

How to use KCC Technical on a Sunday: sign in, check your station, report problems and borrow gear.

For all crew

2027 edition · written for the revamped app. Screens show sample crew and gear, not real people. If something on your screen looks different, the app may have been updated since this was printed.

4. Service Day: your Sunday

5. Scanning a fixture or gear tag

6. Reporting a problem

7. Borrowing and returning gear

8. Schedule and availability

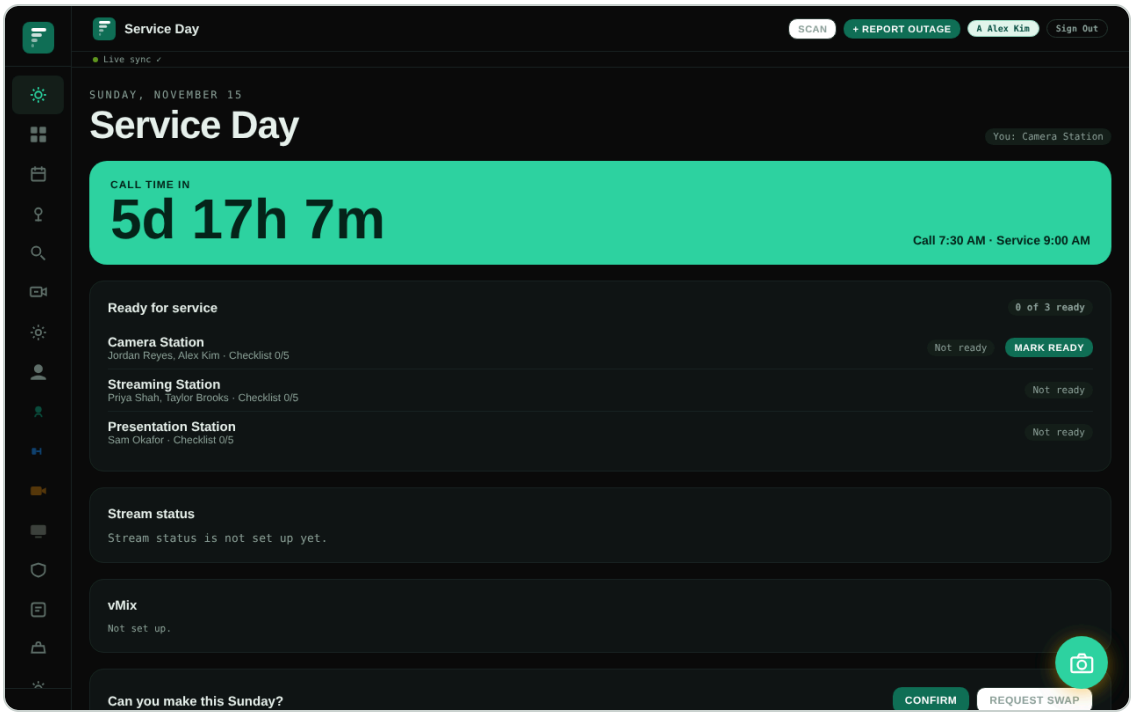

9. Requests and announcements

10. If something goes wrong

1. What this app is for

KCC Technical is where the production crew keeps track of the Sunday service: who is on which station, what has to be checked before the doors open, which lights or gear are broken, and who has borrowed what.

You use it on your phone, a tablet or a computer. It works on the church network and at home. If your connection drops, you can keep working and your changes are sent when you are back online.

Service Day is the first page you see after signing in.

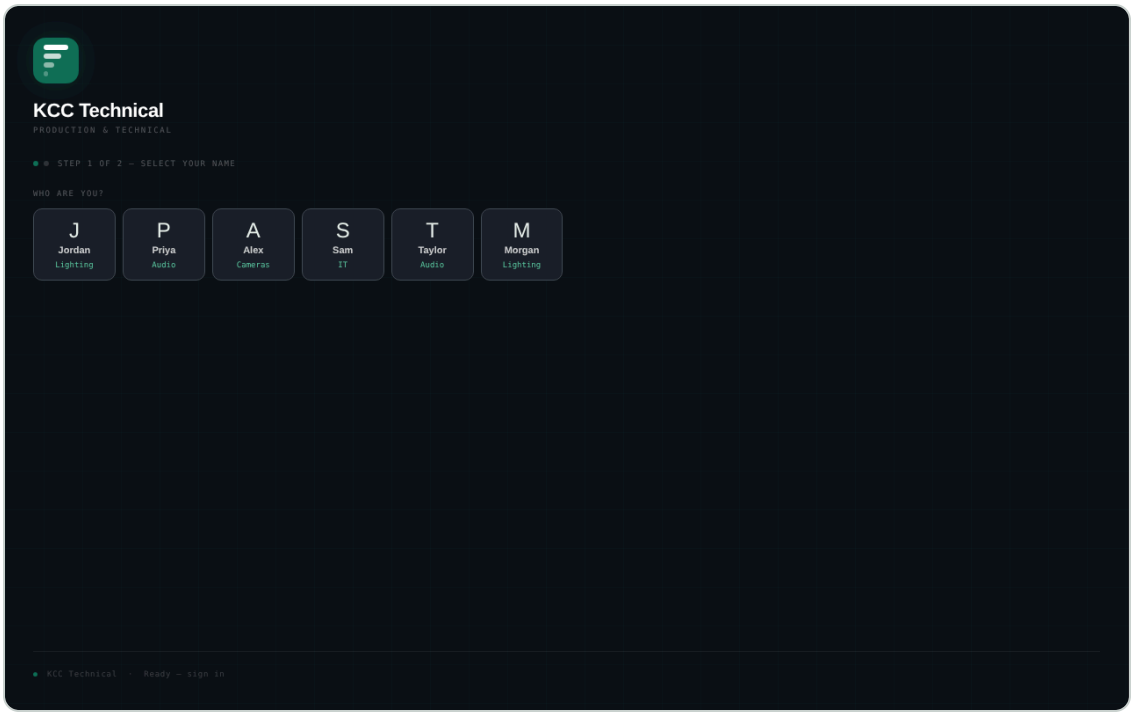

Put it on your phone

1. Open the app's address in your phone's browser.
2. iPhone: tap Share, then **Add to Home Screen**. Android: tap the browser menu, then **Install app** or **Add to Home screen**.
3. Open it from the new icon. It now opens full screen like any other app.

2. Signing in and out

1. Open the app. You see a grid of crew names. Tap yours.
2. Type your password and tap the sign-in button.

3. To leave, tap **Sign Out** in the top bar. This also clears the saved copy of the data from that device, which keeps a shared phone or computer private.

The sign-in screen. Tap your name first, then enter your password.

> **CAREFUL**
>
> If you type the wrong password five times in a row, that account is locked for a minute. If it happens again the wait gets longer (up to 30 minutes). Wait, then try again. The lock is kept by the server, so it applies on every device.

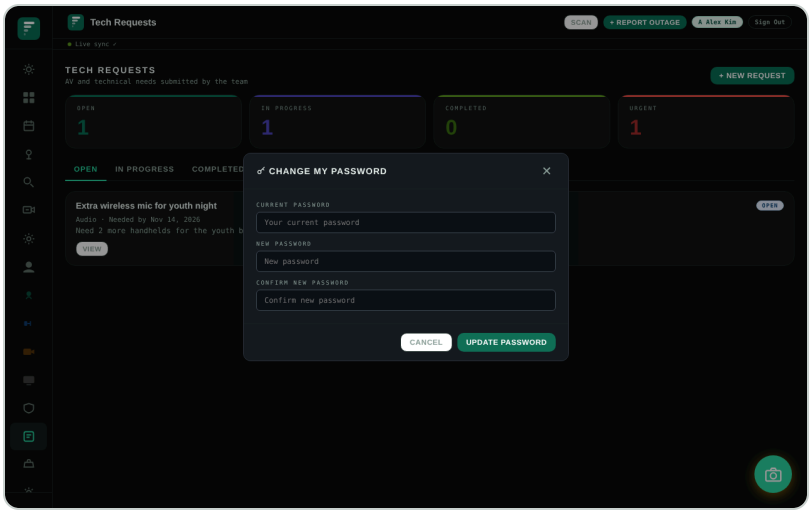

> **NOTE**
>
> Signing in needs an internet connection. If you are already signed in on a phone, the app keeps working offline.

Forgot your password?

Ask an admin. They reset it for you on the Crew page and you can set your own after you sign in.

Change your password

1. Tap **Settings** in the left menu (on a phone: **More**, then Settings).
2. Find the **Account** box and tap **Change my password**.
3. Type your current password, then the new one twice (at least 8 characters), and tap **Update Password**.

The change-password window.

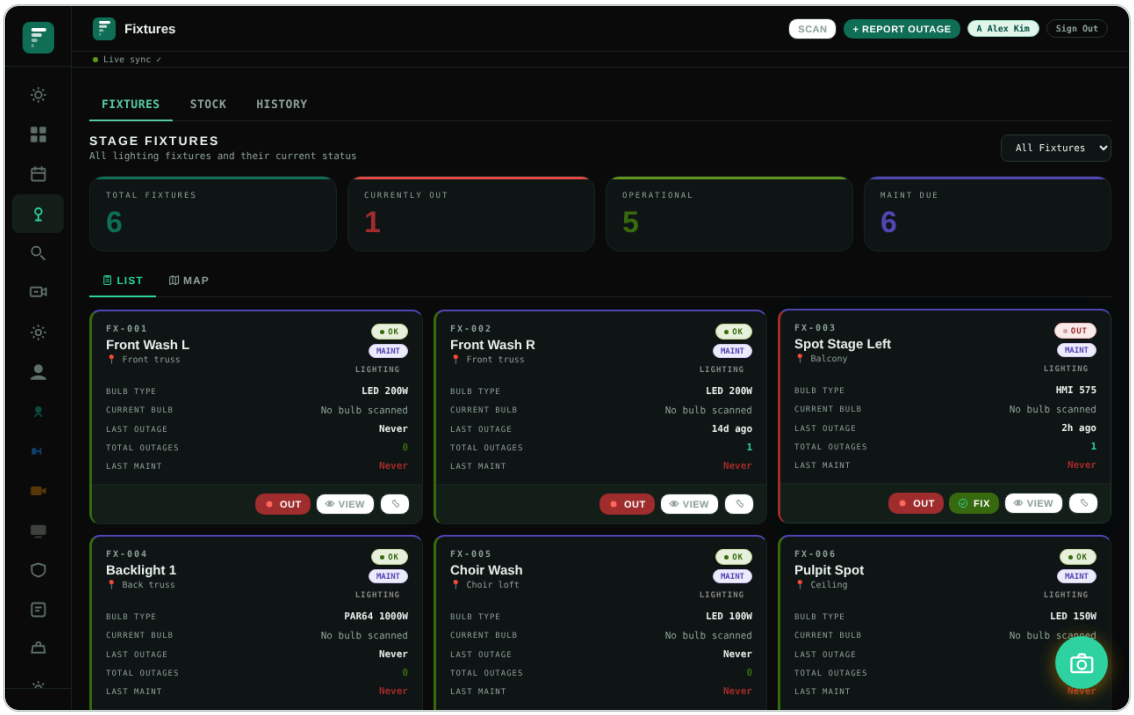

3. Finding your way around

The menu on the left is split into five groups. You may not see every item: some belong to admins only.

Group	What is in it
Sunday	Service Day (your home page), Control Room (admins), Schedule
Rig	Fixtures and Stock (tabs for Fixtures, Stock, History) and Scan
Gear	Asset Checkout and Maintenance
Crew	The crew list, department shortcuts, Training
Admin	Tech Requests, Announcements, Settings, Feedback

On a computer the menu shows only icons until you move the mouse over it. On a phone it is replaced by a bar along the bottom: **Home, Schedule, Sunday, Requests, More**.

The top bar always has **Scan**, **Report Outage**, your name and **Sign Out**. Under it, a small line shows the sync status: **Live sync** means everything is saved; **Offline** means your changes are kept on this device until you are back online.

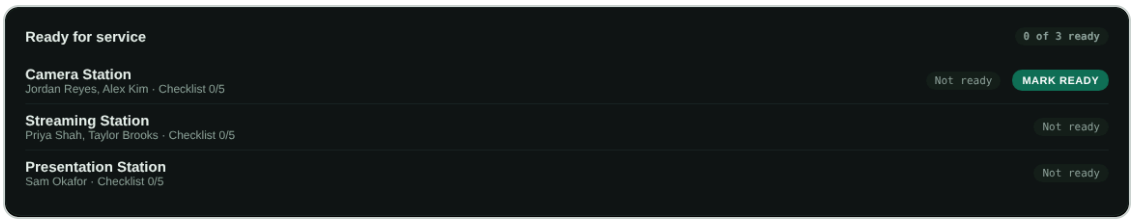

The Rig area. Fixtures, Stock and History are tabs across the top of the page.

4. Service Day: your Sunday

This is your home page. From top to bottom:

- **Call time countdown** and the call and service times.
- **You: Camera Station** (top right) shows the station you are rostered on. If it says you are not scheduled, check with an admin.
- **Ready for service**: each station and whether it has signed off.
- **Can you make this Sunday?** Confirm or ask for a swap.
- **Your station checklist**, **Run of show**, **Production notes** and the **Crew** list.
- **Something broke?** A quick way to report a problem.
- **After service notes**: how it went.

Ready for service. Each station signs off when its checklist is done.

Confirm you are coming

1. On Service Day, find **Can you make this Sunday?**

2. Tap **Confirm**. If you cannot make it, tap **Request Swap** and follow the prompts.

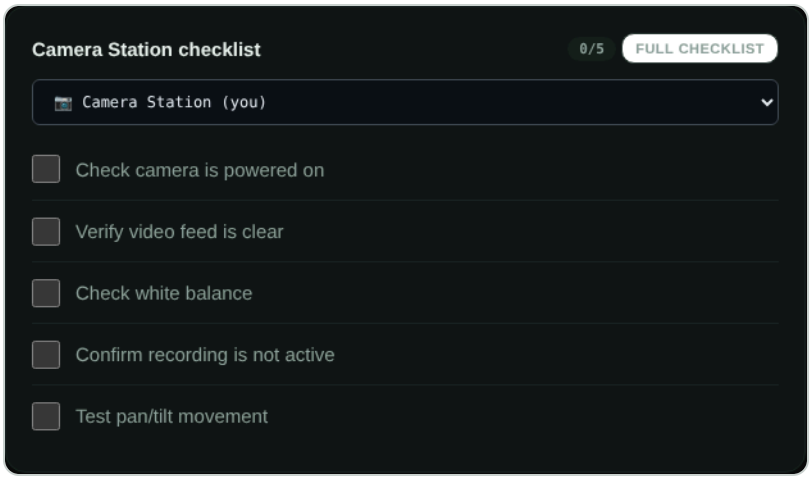

> **TIP**
> Your call-sheet email also has a **Confirm you are coming** link. Tap it once and you are confirmed, with no sign-in. The link is personal to you and stops working after the service.

Confirm or request a swap.

Work through your checklist

1. Find the card named after your station, for example **Camera Station checklist**.
2. Tick each job as you do it. The counter (for example 3/5) updates for everyone.
3. When every box is ticked, tap **Mark ready** on your station in **Ready for service**. If boxes are still empty the app asks you to confirm.

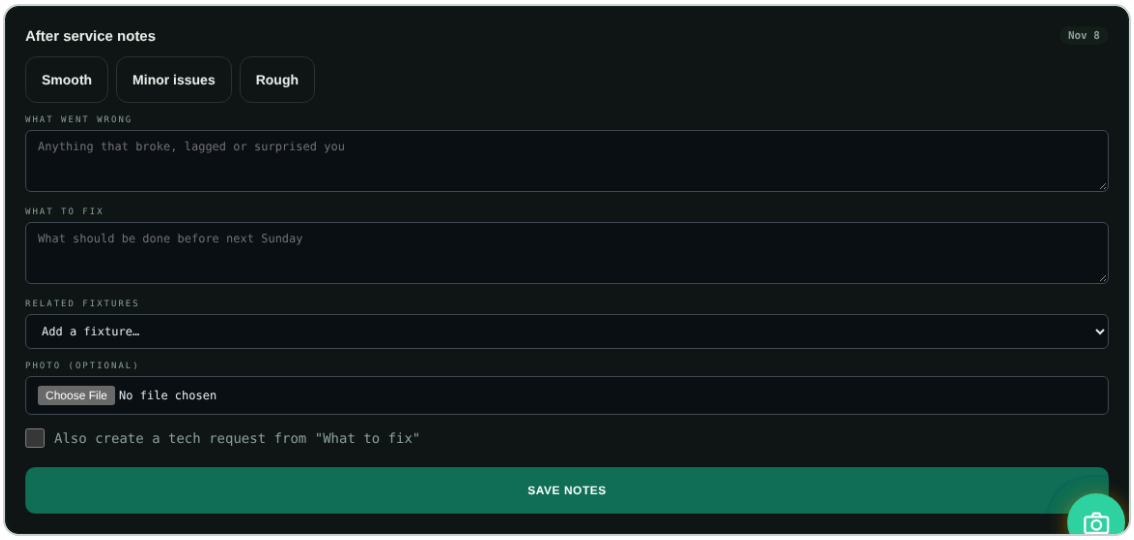

Your station checklist.

> **NOTE**
> Only people on that station, or an admin, can mark a station ready.

After the service

Use **After service notes** to say how it went (smooth, minor issues, rough), what went wrong and which fixtures need attention. Admins read these.

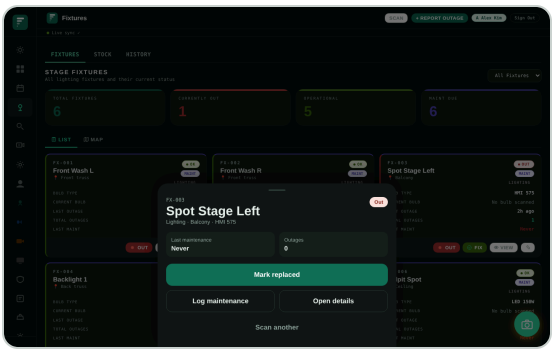

After service notes.

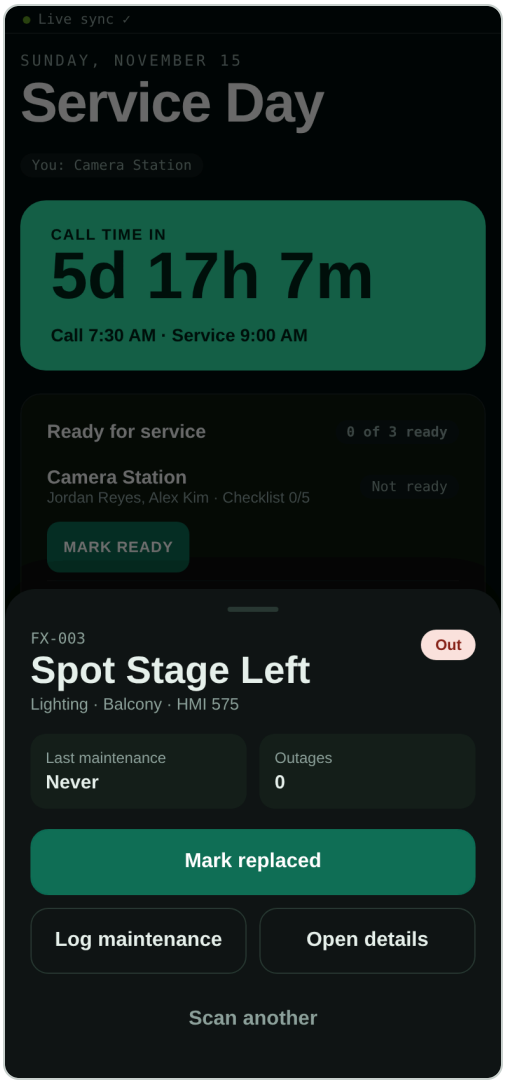

5. Scanning a fixture or gear tag

Every fixture and gear item can have a QR label. Scanning one is the fastest way to report a problem or check something out.

1. Tap the green camera button (phone) or **Scan** in the top bar.
2. Allow the camera if asked, then point it at the label.
3. A card slides up with the item's details and the actions you can take: report it out, mark it replaced, log maintenance or check it out to yourself.

The same card on a computer.

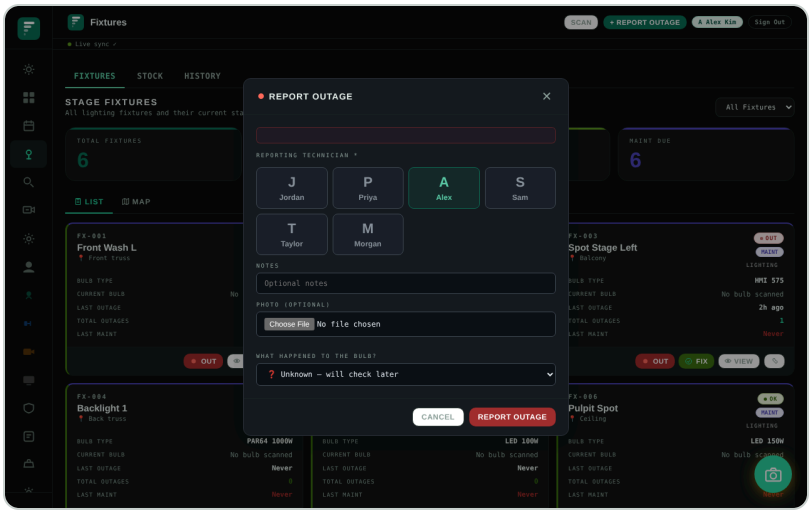

The scan card on a phone.

> **TIP**
> No camera? Type the fixture or gear ID into the scan box instead.

6. Reporting a problem

1. Find the fixture on **Rig → Fixtures**, or scan its label, or tap **Report Outage** in the top bar.
2. Choose the fixture and your name.
3. Describe what happened. Add a photo if you can.
4. Tap the red **Report Outage** button. Admins are told and the fixture shows as **Out**.

The outage report window.

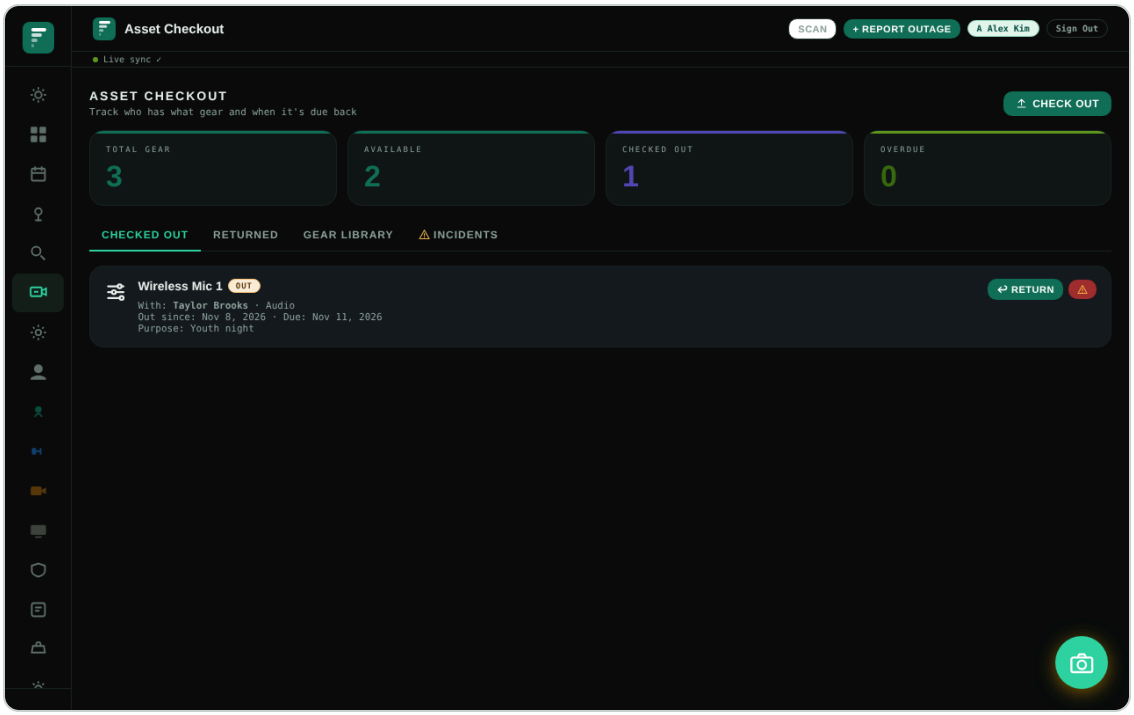

For gear (microphones, laptops, cameras), open the item on **Gear → Asset Checkout** and use **Report problem**.

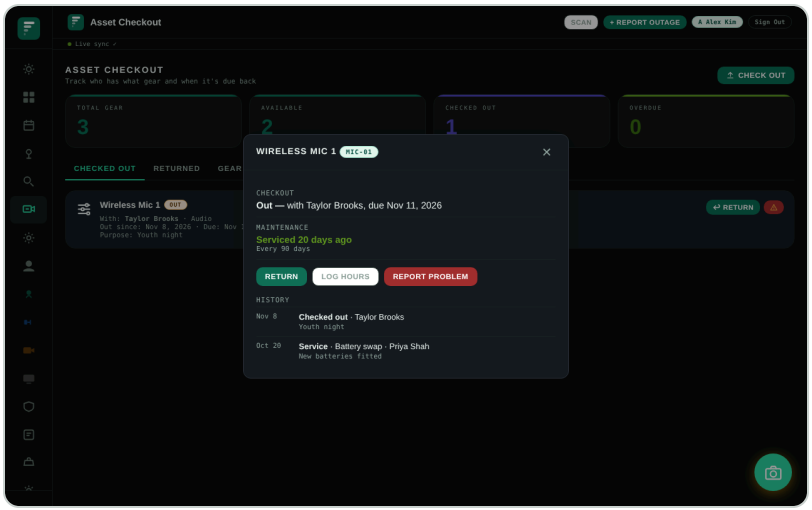

The quick report card on Service Day.

7. Borrowing and returning gear

1. Open **Gear → Asset Checkout**.
2. Tap the item's name to open its page. It shows who has it, when it is due back, its service history and every past checkout.
3. Tap **Check out**, pick your name and a return date, add what it is for, and save.
4. When you bring it back tap **Return**, say what condition it is in, and save.

Asset Checkout: the Gear tab lists everything you can borrow.

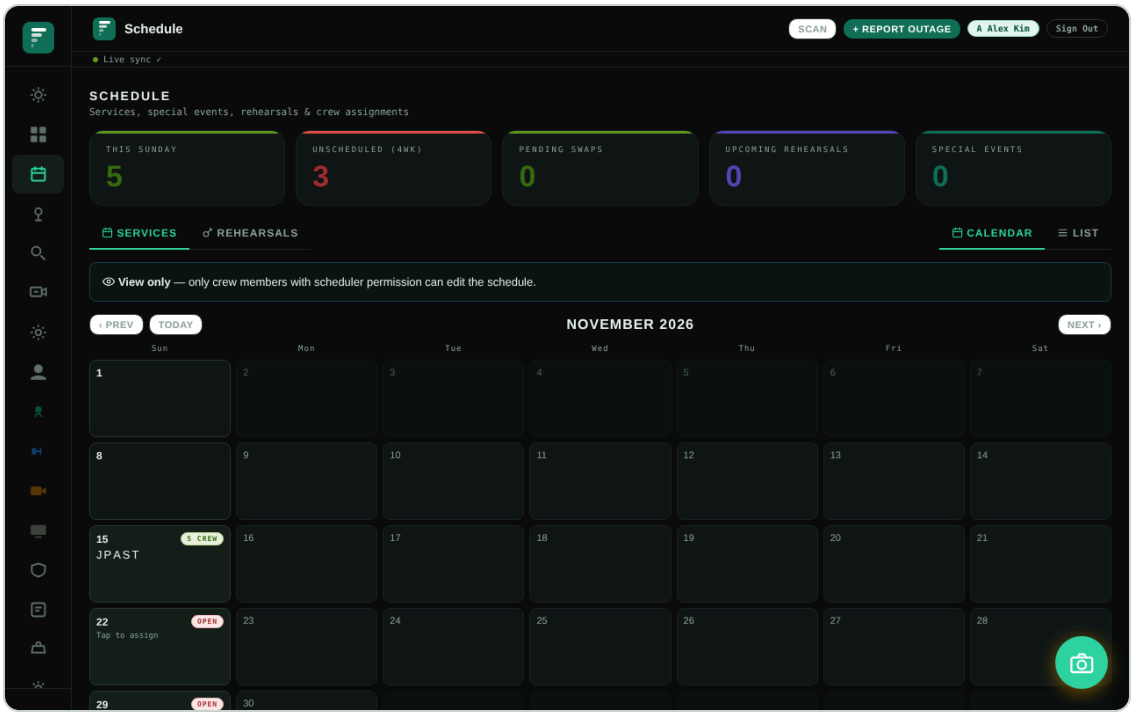

One page per item with checkout, maintenance and history together.

> **TIP**
>
> If an item comes back damaged, choose **Damaged** or **Needs service**. That flags it for an admin.

8. Schedule and availability

The **Schedule** page shows the calendar. Services, rehearsals and special events appear on their dates, and the roster for each Sunday shows who is working. You can see it, but only admins with schedule permission can change it.

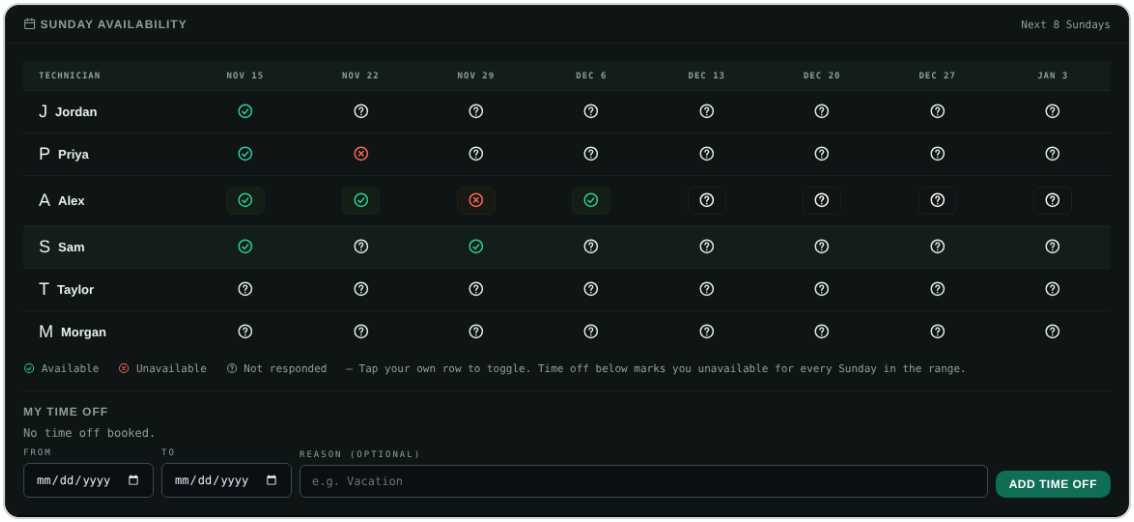

The Schedule page. Crew without schedule permission see a view-only banner.

Tell the team when you can work

Admins check this before they build the roster, so please keep it up to date.

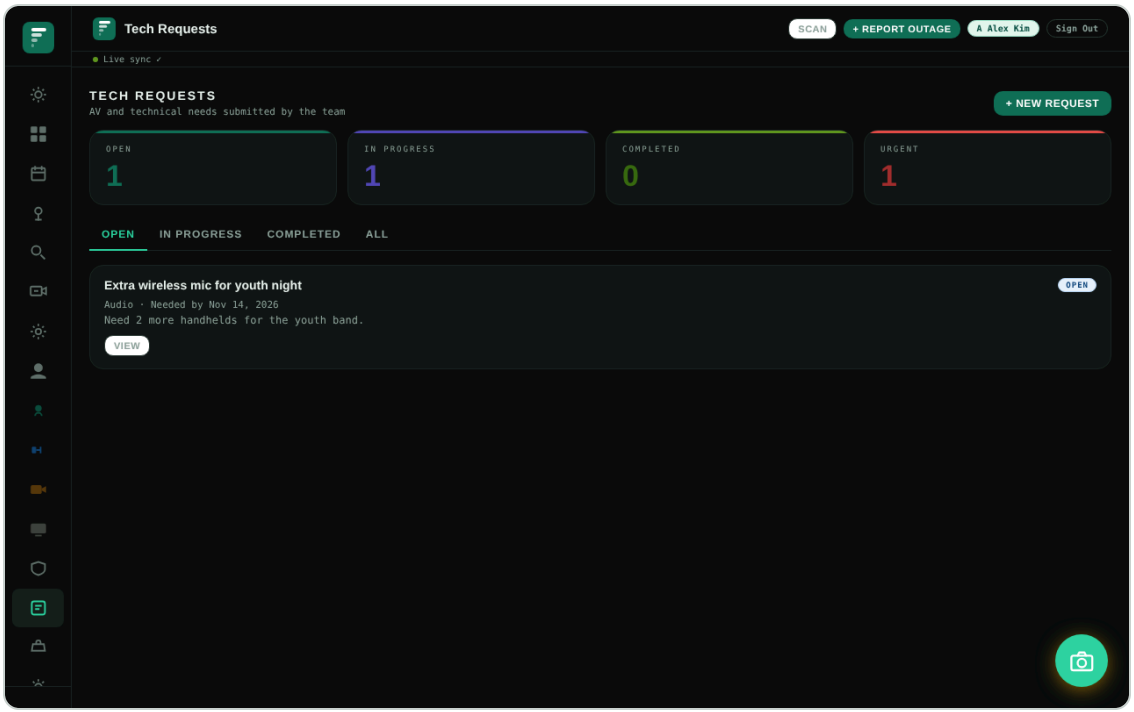

1. Open **Crew** from the menu and scroll to **Sunday Availability**. It lists the next eight Sundays.
2. In your own row, tap a Sunday to cycle between available, unavailable and not answered.
3. Away for a few weeks? Under **My time off** choose From and To dates, add a reason if you like, and tap **Add time off**. You are marked unavailable for every Sunday in that range.

Sunday Availability. You can only change your own row.

9. Requests and announcements

Need something bought or fixed? Use **Admin → Tech Requests** and add a request. Admins see it, update the status and reply. Announcements from the team show on **Admin → Announcements**.

Tech Requests.

10. If something goes wrong

Problem	Try this
I cannot sign in	Check your name is selected, then retype the password. After five wrong tries you must wait (one minute, longer if it keeps happening). Still stuck: ask an admin to reset it.
The sync line says Offline	You have no connection. Keep working: changes are saved on this device and sent when you reconnect.
Scan does nothing	Allow camera access in the browser, or type the ID in the scan box.
I am not on the roster but should be	Tell an admin. Only they can change it.
The app looks out of date	Close it and open it again. It refreshes itself when it has a connection.

You can also use **Feedback** in the menu to tell the admins what could be better.
